

To

Just confirming that you will be doing the work, as below, on our VS1 Cloud package web site <https://vs1cloud.com.au/index.php> using Javascript, bootstrap, MeteorJS.

This is a simple job to finish off the Bank Reconciliations x 2 in VS1.

This job is 90% complete already.

<https://www.youtube.com/watch?v=n5w9GtbeCjo>

The data will come from an API call, to a TrueERP backend database, using the built in TrueERP REST http://www.trueerp.com/wiki/Web_API/

You will be provided with full access to a remote machine, with TrueERP running on it, for testing and given full login details to VS1 Cloud, also for testing. <https://sandbox.vs1cloud.com/>

It is assumed that you will work locally on your own machine and then check in the work onto these machines and test that they work correctly in the full environment. This is to be done every week on a Thursday, to ensure that if something is broken, it doesn't go back months.

Start date would be immediately.

Payment will be made through Freelancer. It will be made within 7 days of completed functionality in the full VS1 Cloud environment. Price for this job is \$2000 inc USD. Deposit of \$250 will be set on Freelancer and released 7 days after the first weeks check in.

Each weeks check in will create a milestone for payment for the following week.

If job is completed and fully tested within 2 weeks of signing contract, an extra \$500 will be paid in bonus.

We have a number of jobs required moving forward and are more looking for a long term relationship with an outside contractor.

Next step once this contract is signed, is you will be given full access to the remote machine with VS1 Cloud source code and put in touch with our head developer for VS1 to go over the requirements in more detail.
